

Ray of Hope for Cancer Patients.

Ahmedabad is among the top five cities where the maximum cases of cancer are registered. In Ahmedabad city about 8000 new cases are registered every year. Platelets that help in blood clotting are a vital in cancer treatment and in other surgical procedures. In Gujarat, patients under Cancer treatment come from various corners of the state. They find it difficult to manage Platelets as their shelf life is only 5 days. They undergo sever stress and drudgery to procure platelets.

Prathama Blood Centre provides free platelets to Cancer patients (BPL Families) admitted in Government hospitals and trust managed hospitals, with the help of Cancer Support Group.

To ensure round the clock availability of Platelets 'Cancer Support Group Registry' is maintained where a regular voluntary blood donor register's to support the cause of Cancer. This will not only reduce the risk of multiple donor exposures but also ensures regular supply of platelets when needed. A special quota of platelets is reserved for Cancer patients under this program.
