

How about giving life to someone!

There are more than 1000 Thalassemia major patients in Ahmedabad who need blood every fortnight. More than 10,000 patients are found in Gujarat. Thalassemia Support Group launched in 2010 to provide safe and quality blood to Thalassemia major patients.

Prathama is supporting such patients with safe blood products and services totally free of cost. Besides that Prathama is also helping such families with free medical and technical guidance for medication and in some cases bone marrow transplantation, as well. Many such patients have received financial aid with the help of Prathama.

You can contribute to the cause by joining Thalassemia Support Group an activity under Prathama Blood Support Program.
